MOVEMINING COMPETITION - SEASON 05

This application is based on educating and informing in a fun way, looking for a highlight mining and the value that this activity represents in our daily lives. It is a fact that minerals are essential to the technological advancement of the modern world. That is why we intend to give a new approach to minerals, because every single object we find in our environment is thanks to mining.

APPTECmining consists of several levels where the user will be able to identify the characteristics of each mineral, the use in the different objects and having the option to expand its information by clicking on each picture. To pass from one level to another, the user will have to write the correct answer with the name of the mineral that is presented and all this in a fun and entertaining way.

With APPTECMINING we seek to change the perspective of mining as the application will show the importance of minerals and the impact it has in our daily lives.

The cost of our project will be \$1500 which includes the creation of the application, registering our brand in order to upload it to the PLAYSTORE, marketing and logistics.

Our project will have an impact on children and students between 8 - 25 years old in order to create a new concept of mining in the new generations and have a global reach.

The future in your hands.
